- Mongo
- Bootstrap
- Bulma
- Tailwindcss

## TOOLS.

- Vs code
- Docker
- Postman
- Terminus
- DBeaver
- Nosql booster
- Xcode
- VM ubuntu

## EXPERIENCE.

### Career Website

-Project Internship at Ookbee U  
-2022

- Respectively. When a user locates a position that interests them, they can search and filter the available positions. Despite the fact that the admin page has JWT token authentication and a reset password method that sends an otp to your email when you forget it. The landing page of the website shows the working environment and has a page with filters for the different kinds of jobs that the organization is looking for.

### Reservation Van Mobile App

-Capstone Project at KMUTT  
-2022

- Can allow drivers and passengers to see the schedule time, identify passengers who have registered their cars on their maps, and view the route path, which can estimate time and distance from the driver's location. As a result, we have an admin cms admin who can control the vehicle, schedule, and route.

### Reforestation activities Mobile App Project

-Project at KMUTT  
-2021

- The main idea is to emphasize the value of forests. We created a platform that is based on the SDGs and uses Flutter to code. Users can publish activities related to the forest to invite others to participate in those activities. The system also contains login and profile systems so users can change their own information.

### React and Javascript

-Practice  
-2022

- Postpost(Posting site for random image in post.)
- maphoto(Image search engine website. If search for dog, it's will show only images of dog)
- Seasons(Wether and season forecast based on user location.)
