Full-stack Developer with 4 years of experience, specialized in building complex enterprise systems with **React 19** and **Next.js**. Passionate about AI-driven workflows and scalable state management using **Valtio**.

EDUCATION.

King Mongkut's University of Technology
Thonburi 2019 - 2023
Bachelor of Science
Computer Science (English Program) (CS)

TIMELINE.

Innovative | Frontend Developer
Nov 2024 - Present
Nextzy | Full-stack Developer
May 2024 - Aug 2024
Devcula | Frontend Developer
Jan 2023 - Jan 2024
Ookbee | Full-stack Developer (Intern)
Jun 2022 - Dec 2022

SKILLS.

Frontend

- Core: React 19, Next.js, Vite, React Native, TypeScript, JavaScript
- Styling: Tailwind CSS v4, Material UI (MUI), Ant Design, Bootstrap
- State & Data: Valtio, MobX, Redux, TanStack Query, Axios
- Libraries: Lexical Editor, Recharts, Formik, Yup, GIS Map

Backend

- Frameworks: Node.js, NestJS, Express.js
- Databases: Oracle, PostgreSQL, MySQL, MongoDB
- Tools: TypeORM, DBeaver, NoSQL Booster, REST APIs, GraphQL

AI & Modern Workflow

- AI-Assisted: Antigravity, Codex, Cursor
- Engineering: Docker, Linux (Ubuntu VM), Git (GitHub, GitLab)
- Collaboration: Jira, Figma, Postman, Bitwarden, Miro

CERTIFICATE.

- NVIDIA DLI Certificate Completion: Foundation of Deep Learning.
- CITI program: Human Subjects Research (HSR) and BioMed-Social Sci Basic Course.
- Kaggle certificate: Introduction to machine learning.

EXPERIENCES.

INNOVASIVE

Electronic Document Management Portal (**Antigravity**)

- Built an enterprise EDMS with complex approval workflows, **digital signatures**, and **QR** verification. Developed the core frontend using **Vite React 19** and **Tailwind v4**, including a custom **Lexical text editor**, **AI document** summarization, and interactive **Recharts** dashboards.

Provident Fund Management Application (**Antigravity**)

- Developed using **Vite React 19**, **TypeScript**, and **Tailwind CSS v4**. Built a **multi-step onboarding** flow for fund membership and an interactive risk assessment module that adapts UI themes based on user results. Implemented complex form handling for member profiles, beneficiaries, and investment plans using **Formik** and **Valtio**. Integrated PDPA consent and registration APIs via **TanStack Query** and managed application routing with **Wouter**.

Enterprise Lab Management Application

- I developed an enterprise management system using **Next.js**, **TypeScript**, and **Tailwind CSS**. I built the core modules for inventory tracking, user management, and laboratory workflows. I also implemented state management using **MobX**, integrated digital signature features, handled complex form data with **Formik**, and managed API synchronization through **TanStack Query**.

NEXTZY

built a full-stack Web Road **Transportation System**. I handled the backend using **NestJS** and **Oracle DB**, and created internal data management pages with **React**, **Redux**, and **Bootstrap**, using **Axios** to smoothly connect external services.

DEVacula FinTech & Poll Vote

- a mobile **crypto trading app** with **bot** features using **React Native**, and a secure **blockchain voting** website using **Next.js**. I designed clean, responsive screens using **Tailwind CSS**, **MUI**, and **Ant Design**. handled complex data and forms with **GraphQL**, **React Query**, and **React Hook Form**, and set up automated tests with **Playwright** to save time on manual testing.

OOKBEE Career Website & Recruitment Platform & Workshops

- "Gained hands-on experience as a Full-Stack Intern, building websites from front-end to back-end using **React**, **Next.js**, **NestJS**, and **Node.js (JavaScript/TypeScript)**. Designed web interfaces using **Tailwind CSS**, **Ant Design**, and **MUI**, and managed databases like **PostgreSQL** and **MongoDB**. Closely mentored by senior developers through workshops and real-world projects, I learned how to write clean code, structure project folders properly, and build standard **REST APIs** and **CRUD** systems. I also gained practical experience in checking application performance and following **best practices**, like naming conventions, to make the code easy to read and maintain."
